## ***Project Engineer/Manager for Site/Transportation Engineering & Consulting Firm***

Stonefield Engineering & Design, a full-service Professional Engineering and Consulting Firm, is recruiting enthusiastic and goal-driven project engineers. Our firm offers a unique career opportunity for candidates as passionate about personal and professional growth as our team is. We are committed to providing the highest level of engineering expertise and customer service to our clients. For those who join the Stonefield team, we provide the tight-knit feel of a small firm while offering unparalleled access to management and opportunity for learning and career advancement.

Stonefield provides engineering and consulting services for private developers, universities, and public agencies. We are Site Engineers and Transportation Engineers seeking to expand our boundaries and services at all times. Above all, we are problem-solvers and solution-finders for our clients and the communities we work in. We employ technology – from leading edge communication devices to geographic information system and 3-D modeling software – to provide accurate and easily comprehensible project documents to meet the objectives of our clients.

### **Job Description:**

Stonefield Engineering and Design is currently recruiting a Project Engineer/Manager to join the Transportation/Traffic Engineering Team. This is a dynamic position that will offer the opportunity for diverse interaction and rapid growth. We are looking for an individual that is motivated to work at a fast-paced, young, and limitless company. The right candidate will bring a strong technical background, interpersonal skills, intellectual curiosity, and a desire for continued growth and learning. As Stonefield is a multi-disciplinary firm, interest in cross disciplinary work within the field of Civil Engineering is encouraged. Job responsibilities will include preparing Traffic Impact Studies, attending project meetings, roadway design, traffic signal design, and Highway Capacity Analysis. The position will also include project management responsibilities, zoning/land development and NJDOT permitting, field inspection, site plan assessments, and preparation of project reports.

### **Desired Skills & Experience:**

While there are numerous skills that will assist a new employee – such as knowledge in AutoCAD, understanding of the MUTCD, NJDOT/NYS DOT/AASHTO Design Guides, Highway Capacity Manual, and technical writing – we are also intrigued by someone who seeks to overcome challenges and to be an innovator within the industry. The following minimum requirements are expected of candidates:

Bachelor of Science degree in Civil Engineering  
Strong communication and organizational skills  
Self-motivation

Experience with Synchro/SimTraffic, Highway Capacity Manual/Software, VISSIM, AutoCAD or MicroStation, zoning and site plan permitting process preferred.
